

Enter a New Dimension in Comfort

Comfort Window is a revolutionary new comfort control system that combines elegance with ingenuity. Using both temperature and humidity, Comfort Window controls your comfort rather than just your temperature.

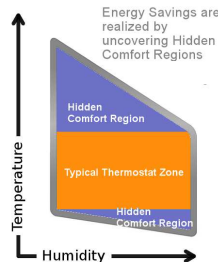

Comfort

Comfort Window has a two dimensional view of comfort that gives you a better understanding of your actual comfort. Using heat index calculations and leveling, our patent-pending technology automatically defines for you your own custom region of comfort, given your temperature and humidity settings. Comfort Window™ then controls your equipment to keep your current temperature & humidity point inside of your comfort region.

Cost

Most programmable thermostats rely solely on the program schedule to save money. Comfort Window has that, but in addition Comfort Window uncovers *Hidden Comfort Regions* – temperature & humidity combinations where the humidity is low enough where you still feel comfortable. In these regions, Comfort Window will shut your AC system off. Comfort Window also saves money through an innovative method that brings outdoor air indoors to heat or cool your home whenever possible, reducing AC run-time around 10-15%.

Convenience

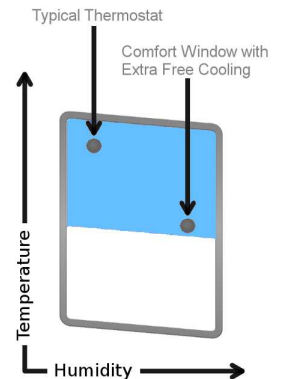

Internet-connected, with a color touch-screen LCD, and with a re-imagined Program Schedule interface, Comfort Window puts your comfort at the tips of your fingers. View interesting historical temp/humidity data and pick from a number of pre-made program schedule profiles to make setup easy.

Other "Cool" Features

Extra Free Cooling

Using outdoor air to cool off your home whenever possible, Comfort Window takes it one step further, giving you extra comfort by cooling deeper into your Comfort Window region, for the minimal cost of running your fan.

Re-imagined Program Schedule

A graphical interface makes it easy to change your program schedule. Instead of 3-4 entries per day, the Comfort Window requires just 3 or 4 entries total.

Even More Features:

- Ventilation Timer
- One-touch Overrides
- Encrypted online communication
- Online Program Schedule Profiles
- Remote Indoor Temp Sensor
- Outdoor Temp/Humidity Display
